

# Fleet Inspections

# Fleet Inspections

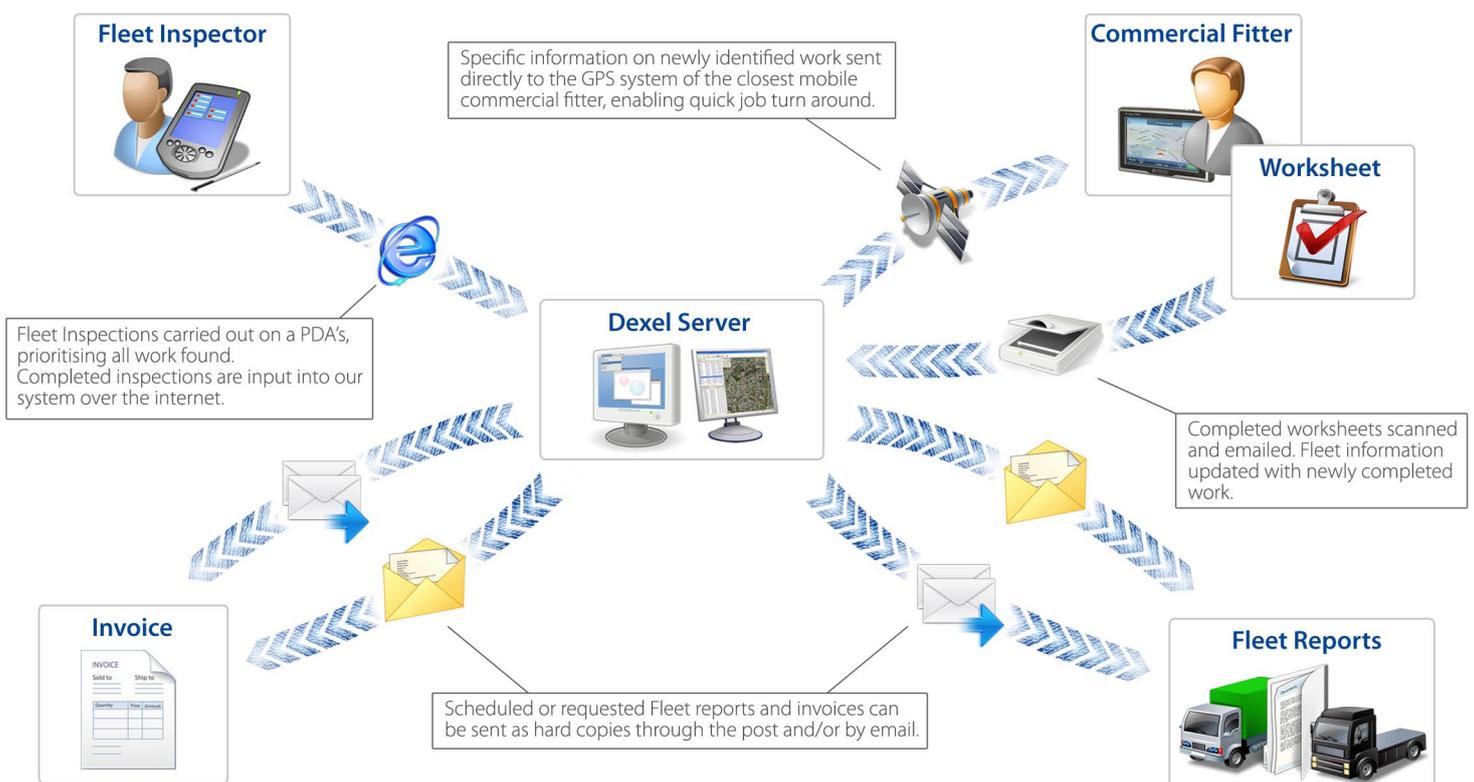

- Specialist, fully trained inspectors
- Inspections carried out 7 days a week to fit your schedule
- State of the art fleet inspection tools giving unparalleled inspection efficiency.

Dexel employs a specialist team of fully trained fleet inspectors that can monitor your fleet 7 days a week to accurately record up-to-date information on the condition of the tyres on your fleet.

The inspection data is then used to provide a great variety of reports enabling you to react quickly when needed and make the essential decisions to effectively manage your fleet and operating costs.

As the customer you have the option to analyse inspection data yourself and select work to be carried out. However we believe that the peace of mind and response time advantages gained through pre-authorising creates the most efficient working relationship.

The diagram below shows the complete process from inspecting your fleet, through to carrying out service work and finally providing you with fleet reports and invoices for the work completed.

## Get a Rapid Response with Pre-Authorisation

Putting your trust in Dexel to manage your fleet effectively will help to give you peace of mind, knowing we are working to reduce your fleets downtime and costs.

Pre-authorising us to carry out necessary service work flagged by our inspections means our mobile commercial fitters can react quickly. As soon as the fleet inspection is completed, our inspectors instantly upload the newly captured data over the internet from their PDA to our system.

This often means that before the fleet inspector even returns to the depot, one of our mobile commercial fitters could already be on the way to carry out the flagged work to ensure your vehicles are fully operating at optimal efficiency, without incurring down time.
